

Newsletter

Summer 2022

Dear readers,

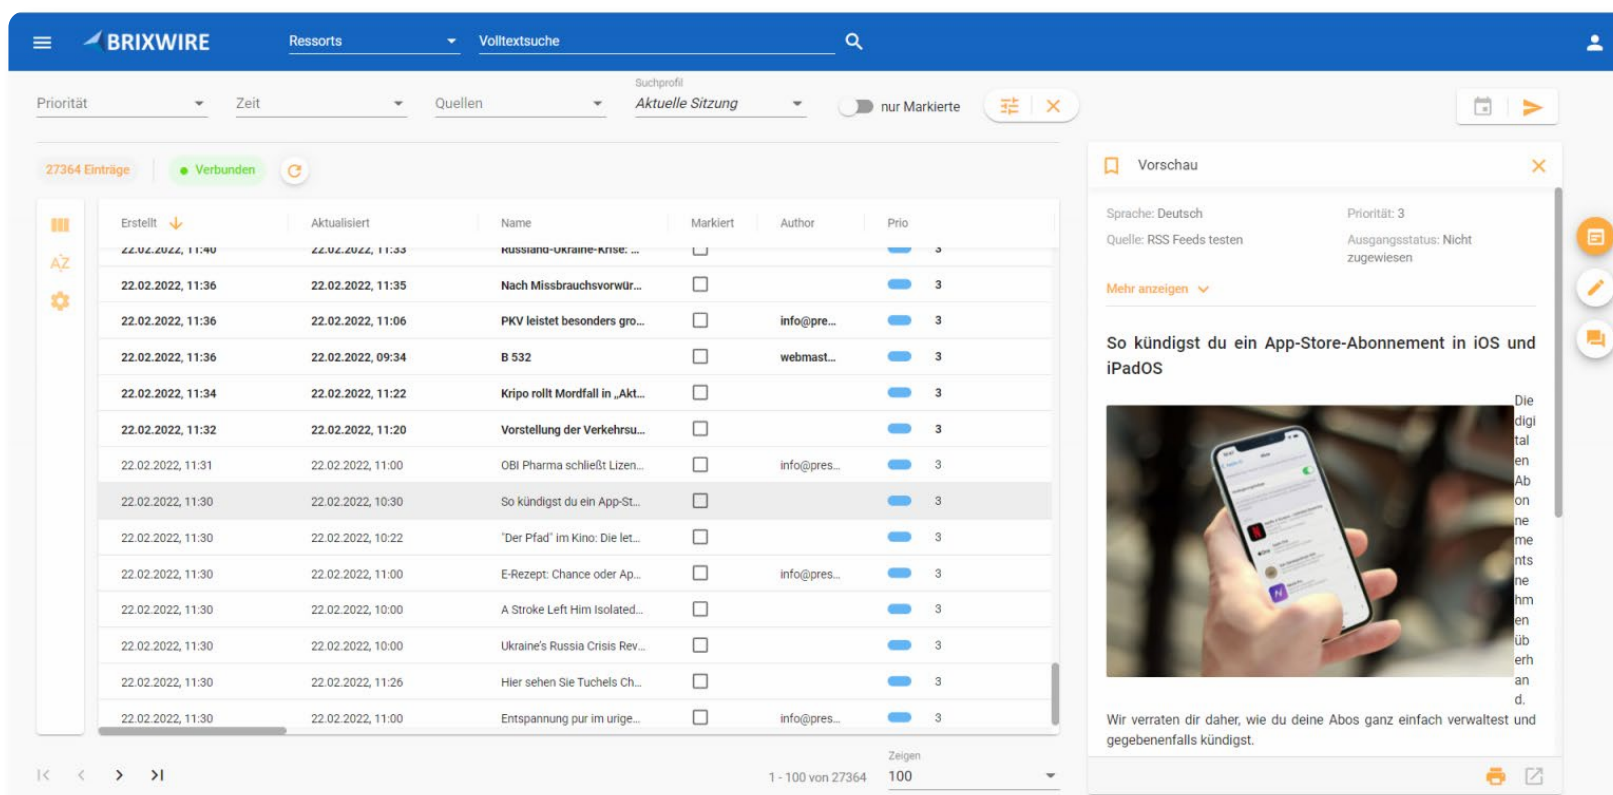

We haven't published the newsletter for a while, but that doesn't mean we haven't been working on BrixWire, actually the opposite, version 2.1.18.13 comes with many new features and plugins, we are also working on a new concept called Spotlight, and as always we would like to remind you that we are open to your requests and suggestions.

CURRENT STATUS

Here's a look at what's new in the platform:

- ▶ Platform Independence
 - ▶ Rest API
 - ▶ Angular UI
 - ▶ Loadbalancer
 - ▶ JWT Support
 - ▶ Push notification of the client
 - ▶ Auto publishing, AnyFirst approach
 - ▶ Docker
 - ▶ News translation
- ▶ New plugins:
 - ▶ Outdated RSS feeds
 - ▶ Outdated file system plugin
 - ▶ Woodwing Plugins
 - ▶ WordPress Plugins
 - ▶ LivingDocs Plugins
 - ▶ Mail Plugins
 - ▶ Twitter Input Plugin
 - ▶ Facebook Plugins
 - ▶ REST Plugins for generic inputs and outputs
 - ▶ Telegram Input Plugin
 - ▶ Brix2Brix Plugin

[For more information about this version click here](#)

The screenshot shows the BrixWire News Browser interface. The top navigation bar includes the BrixWire logo, a search bar, and user profile options. Below the navigation, there are filters for 'Priorität', 'Zeit', and 'Quellen'. The main content area displays a table of news entries with columns for 'Erstellt', 'Aktualisiert', 'Name', 'Markiert', 'Author', and 'Prio'. A preview window on the right shows a news item with the title 'So kündigst du ein App-Store-Abonnement in iOS und iPadOS' and a thumbnail image of a hand holding a smartphone.

A look at the new design of the News Browser in Angular

BRIXWIRE

Spotlight

BRIXWIRE SPOTLIGHT UKRAINE

Scope

Aim: additional information, verified or unverified should be made available via BrixWire. We want to improve the news situation around the conflict.

There is currently no business model for this server and it is not in scope for this server. The goal is to provide additional information as soon as possible.

Why

We are affected by this situation, we wish that the phrase "cannot be independently verified" appears less often and we have credible contacts with different sources of information through our Ukrainian collaborators.

Necessary additional functionality

We are working on workflow extensions that:

- ▶ Translate stories
- ▶ Create video transcripts

These extensions will be available interactively or they can be integrated into the input / output workflow of BrixWire Stories.

I.e.: we will be able to provide the content from the different channels in DE and EN and we will be able to generate stories from uploaded videos.

We will connect the Ukraine server to existing instances of BrixWire via a Brix2Brix plugin, so that the server can be accessed via a normal BrixWire. The stories can be processed and published as before.

Who has access?

- ▶ In the first step, the DeveloperPack customers, if that is desired.
- ▶ FactChecker, which verifies news on a central instance.

Content

The server is built in this order:

- ▶ Official communication platforms of Ukraine (Ukrinform)
- ▶ Articles from the Ukrainian press (RSS Reader)
- ▶ Twitter: selected accounts
- ▶ Mail access to store stories from known senders
- ▶ Telegram ▶ TikTok?

Stories can be published interactively or fully automatically on all available channels.

Time frame and procedure

- ▶ Sources are identified and integrated
- ▶ Transcript and Translate Extensions will be implemented
- ▶ Brix2Brix plugin will be developed
- ▶ Verification flags are integrated and can be set and used as filters.

The approach is designed for speed and increments. We would like to achieve a usable effect in 4-6 weeks. Afterwards the concepts can be refined and extended.

Long-term use

The developed plugins can of course also be used in internal workflows, as it is a normal BrixWire server.

The Brix2Brix plugin not only works against a Central Server but can also be used between two publishers (or better: between two BrixWire instances) to share content, verify, etc.

The concept of a topic server can be applied to different scenarios.

Collaboration on the project

We would like to create synergies and partnerships to take this idea to the next level.

There could be several ways to collaborate:

- ▶ Verifying news stories
- ▶ Gathering sources for reliable content

We are open for more ideas!

CUSTOMER REQUIREMENTS

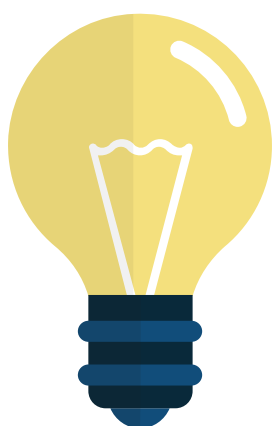

We are working hard on the development of Ukraine Spotlight, as well as on improvements and new functionalities of BrixWire.

Nevertheless, we are open to your wishes and requirements, which we will take into account within our current capabilities.

WINTER PROGRAM

This section is written to gather your needs, your ideas and suggestions, and we need your input to steer the implementation of BrixWire in an agile direction.

Elasticsearch / Solr

To improve speed and search capabilities and enable high volume data.

Video transcription

Using artificial intelligence, we want to implement this functionality to improve the cataloging of video data. This will also make it easier to search for videos in a database.

I HAVE AN IDEA
